Cleaning Produce with Kangen Water®

As previously suggested, washing your produce is a must. Organic produce isn't protected from pathogens in dirt and germs from various hands checking for ripeness. This is when your Kangen Water® really comes in handy. The Kangen machine produces up to 5 types of healthy water to get your food clean! Utilizing the various waters available like: Strong Acidic Water® (pH 2.5), Strong Kangen Water® (pH 11.0), and Kangen Water® (pH 9.5), you can ensure that your food is super clean and ready to eat.

If you don't have the luxury or availability of organic produce it's even more important to wash your fruits and veggies considering they have been treated with pesticides. Strong Kangen Water® is powerful enough to break apart the pesticide, leaving your food clean and chemical-free. Tap water itself can't clean your produce and produce sprays are expensive and leave an aftertaste on the more porous produce. Using your Kangen® machine in the kitchen is the healthiest and most cost-effective way to clean your produce!

Some more healthy tips:

- Always buy in season to ensure freshness.
- Always examine produce for ripeness and bruising.
- Wash hands before and after handling food.

Now that everything is clean and ready to use, head over to our [Greener Food page](#) to check out some of our favorite recipes substituting Kangen Water®!

It is definitely good for you when you can effectively avoid and even remove toxins, chemicals and tons of other poisons from your life. It is for sure better for the planet to find ways to go on about our lives without leaving such a heavy footprint for the next generations.... how about that?

I love soaking my meats with the 2.5 acidic water to clean any bad bacteria on my meat and I soak my vegetables with the 11.5 to take off all the bad pesticides on it. Having this kangen water ionizer machine gives me the confidence that I am eating healthier.

I buy organic fruits and vegetables for my family and didn't realize they spray them with pesticides for transport. Then after I bought my SD 501 I wash them with the 11.0 (strong Kangen water) and I could see the pesticides that were washed off.
